What is this?

Task A requires you to build a professional website, or augment your current one, if you already have one.

This is, we hope, a worthwhile opportunity for you to build your own professional website. Not only will this give you some additional practice coding and using R and R-adjacent tools like Quarto, it's a low-cost and potentially high-yield method to establish your professional presence online.

To complete this task successfully, you must submit a permanent URL from which Dr. Zhang has to be able to open your website and read its contents.

Submitting your Website

Submit a link to your website to Dr. Zhang (lxz716@case.edu) and cc'ed TAs Kathryn Menta (kkm83@case.edu) and Marie Masotya (msm191@case.edu) in an email with the subject line **My Website** by the deadline specified in the Course Calendar. In the body of your email, briefly tell me how you created the site (Quarto, or something else.)

Instructions and Guidance

We want you to build a professional looking website that will be useful to you. The content is (mostly) up to you, but it's worth considering using this opportunity to craft your online presence.

The Five Key Elements

Dr. Zhang will be happy if your site clearly includes at least the following five elements:

1. A front page including a photo of you or of something relevant to you.
2. Links to your social media presence, if any, and a way for people to get in touch with you via email.
3. An About Me or Welcome section on your front page, which briefly describes what you're doing now.
4. Some information on your Education, Experiences, and/or Projects
5. A way to download your CV

A blog is also an appealing way to connect your thoughts with the world, and including non-professional stuff is OK, too, of course.

Using Quarto to Build the Site

Here are some resources that we think might be useful to you. If you find others that are helpful, please share them with us.

- Marvin Schmitt provides a full tutorial and template at [Create Your Website with Quarto](#) . The template [shown here](#) , for example, gives you a great example of what I'm looking for. This is the most common tool people who've completed this have mentioned to me.
- Quarto's general guide to [Creating a Website](#) may be helpful.
- The Quarto website shows you how to create a blog website within R Studio [in some detail here](#) .
- Sam Csik has useful thoughts on [Creating your personal website using Quarto](#)
- We found Drew Dimmery's [Quarto for an Academic Website](#) interesting and useful.
- [Chi Zhang's site](#) provides a nice template for a personal site.
- The Quarto website shows you how to create a blog website within R Studio [in some detail here](#) .
- Beatriz Milz' [Creating a blog with Quarto in 10 Steps](#)
- Albert Rapp's [The Ultimate Guide to Starting a Quarto Blog](#)
- CrumpLab gives us [Blogging with Quarto: A 10 minute getting started tutorial](#) (about 10 minutes)
- Isabella Velásquez at RStudio has a YouTube video called [Building a Blog with Quarto](#) (just over an hour)
- Thomas Mock shows you how to [Create & Publish a Quarto Blog on Quarto Pub in 100 Seconds](#)

- Joshua French has a playlist at YouTube of nine short videos that walk you through [Creating Websites with Quarto and Github](#)

Can I use something other than R / Quarto to build my site?

Yes, but you'll receive less credit than a good Quarto site would receive. So I don't suggest you to use something else.

Good options to consider include [Owlstown](#) , and [Wix](#) , and each offers templates that would work nicely.

Follow whichever approach is best for you and you feel most comfortable with. The key thing is to commit to making this a part of your life going forward, however you most effectively do that.

What if I already have an active website?

If it includes the five elements listed above, great! You should definitely submit it to me as soon as possible.

Should I spend a lot of money to have a fancy domain name?

No. There are many low-cost solutions if you want to register a domain and use it for this purpose. Google Domains can provide you with most available domains for something like \$1 per month. I wouldn't go much above that, and a free name is even better.

Will the TAs help me troubleshoot my website?

If they can, sure, but only after anyone else looking for 431 help has had their problem settled. I do not guarantee that we can help fix your website problems.

Grading Task A

- Task A is worth 45 points.
- Students will receive all 45 points if ...
 - their Task A submission is on time, and
 - their Task A site was built using Quarto, and
 - their Task A site clearly includes [the five key elements listed above](#), and
 - their Task A site has no unfixed typos or grammatical issues that Dr. Zhang notices in his review.
- Students will receive a maximum of 40/45 points if their site was built using something other than Quarto, but otherwise meets these standards.
